

One design system. Every SUSE product.

A fully tokenised, WCAG 2.2 AA verified component library — built for Rancher, ready for every SUSE product. Adopt the components, inherit the accessibility, and extend the system where your product needs more — without breaking the style.

Colour is a system, not a palette

Semantic families carry meaning in any theme. Chart colours are chosen for discrimination — never for status.

Solid dot · on-colour text · badge wash — three AA-checked layers per family.

Data visualisation — 8 categorical series

Plus sequential, heat and diverging ramps for data-heavy visualisations.

Two families. One voice.

Lato for the interface, SUSE Mono for output. Every size, weight and line-height is a token.

h1 · 24 Bold

Clusters

h2 · 21 Bold

Review installation

body · 14 Regular

Rancher checked your cluster and will only install what is missing.

body-small · 12 Regular

creates namespace cattle-sbomscanner-system · 0.12.0

h6 · 12 SemiBold

SMALL SECTION HEADER

```
$ kubectl apply -f uiplugin-sbom-scanner.yaml
verifying signature  cosign  OK
```

Components, ready to drop in

Buttons, forms, tables, navigation, cards, overlays — every state including Focus, every size at 24px targets, in all four themes.

Focus, solved once

Download YAML

2px ring at 2px offset, radius derived from the control. One rule, every component, keyboard-visible.

Change a token, theme every product

The same button, untouched, in all four themes. Need patterns we don't have yet? Build them from the same tokens and style logic — the system is made to be extended, not re-skinned.

Adopt it — and extend it

1

Enable the library

Add “Rancher DS” from SUSE team libraries in Figma — components, tokens and all four themes come with it.

2

Design with components

Every control carries its states, sizes and a11y. Swap the theme mode to see your product's look instantly.

3

Ship tokens, not CSS

Engineering consumes the same tokens as CSS variables — design and build stay in lockstep.
